Sub: Directions issued by this office under Section 31A of the Air Act, 1981 in air polluting industries to provide and maintain stack emission monitoring facilities in accordance with Emission Regulation Part – III (ERP-III): regarding

Ref: Directions issued by Central Pollution Control Board (CPCB) under Section 18(1)(b) of the Air Act, 1981, to RSPCB vide letter dated 12.03.2026

Sir,

Apropos the above, the Central Pollution Control Board (CPCB), New Delhi, has issued directions dated 12.03.2026 to the State Board under Section 18(1)(b) of the Air (Prevention and Control of Pollution) Act, 1981. These directions mandate that all air-polluting industries in the NCR region shall provide and maintain stack emission monitoring facilities in accordance with Emission Regulation Part–III (ERP-III), published by CPCB in December 1985, by 28.03.2026.

Further, CPCB has also directed the State Board, to not renew consents of all such industries which do not have proper stack monitoring facilities as per ERP-III norms and shall direct them to close down operations till proper stack monitoring facility is in place. It also states that the absence of proper stack monitoring facility as per ERP-III and as prescribed above

अमित गुप्ता

राजस्थान, बियाड़ी

Regional Office, Bhiwadi Rajasthan State Pollution Control Board

Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019

e-mail: robhiwadi@gmail.com

shall be considered as violation and appropriate action shall be taken including closure of the industry,

In pursuance of the above, to ensure compliance with the directions issued by the CPCB on 12.03.2026, this office has issued directions to all air polluting industries directing them to undertake the following:

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.
6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

This office has been dispatching directions to the concerned industries via Speed Post. However, given the limited timeframe available for compliance, your cooperation is earnestly solicited in the following:-

अमित जुयाल
क्षेत्रीय अधिकारी
राजस्थान प्रदूषण नियंत्रण बोर्ड, भिवाड़ी

Regional Office, Bhiwadi Rajasthan State Pollution Control Board

Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019

e-mail: robhiwadi@gmail.com

1. A list of industries to whom these directions have been issued, along with one copy of the direction letters, is enclosed. You are requested to facilitate delivery of these directions to the concerned industries at your level level as well.
2. To proactively engage with your member industries and sensitize them regarding the urgency and critical importance of ensuring compliance with the stipulated requirements.
3. Emphasize that failure to comply within the stipulated timeline (28.03.2026) will result in stringent regulatory action.
4. widely disseminate this information among all member units through your established communication channels to ensure complete awareness and preparedness.
5. To extend necessary support to industries in addressing any practical difficulties related to the installation of the required monitoring facilities..
6. To organize handholding sessions/workshops for the concerned industries to assist them in establishing adequate infrastructure as required under ERP-III..

Yours sincerely

Sub: Directions under Section 31A of the Air (Prevention and Control of Pollution) Act, 1981 to provide and maintain stack emission monitoring facilities in accordance with Emission Regulation Part – III (ERP-III) published by CPCB in air polluting industry: regarding

Ref: Directions issued by Central Pollution Control Board (CPCB) under Section 18(1)(b) of the Air Act, 1981, to RSPCB vide letter dated 12.03.2026

Sir/Madam

1. Whereas, the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 (hereinafter collectively referred to as the "Acts") have come into force throughout the country with effect from 23.03.1974 and 16.05.1981, respectively.
2. And whereas, the said Acts have been enacted to provide for the prevention, control, and abatement of water and air pollution and for maintaining and restoring the wholesomeness of water and air, and the Rajasthan State Pollution Control Board (hereinafter referred to as the "Board") has been vested with the powers to take such steps as may be deemed necessary for enforcement of the provisions of the aforesaid Acts.
3. And whereas, under the provisions of Section 24 of the Water Act, no person shall knowingly cause or permit any poisonous, noxious, or polluting matter, determined in accordance with the standards laid down by the Board, to enter any stream, well, sewer, or land.
4. And whereas under the provisions of section 25/26 of the Act, no person shall without the previous consent of the Board establish or take any steps to establish, any industry,

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

operation or process or any treatment and disposal system or any extension or addition thereto, which is likely to discharge sewage or trade effluent into a stream or well or sewer or on land or bring into use any new or altered outlet for the discharge or sewage or trade effluent or begin to make any new discharge of sewage or trade effluent.

5. And whereas under the provisions of section 21 of the Air Act, no person shall without the previous consent of the Board, establish or operate any industrial plant in an air pollution control area. Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Vidya Metal Mfg Co. Pvt Ltd.** at **SP-812/F-39-40, Samtal Zone, RIA, Bhiwadi, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

operation or process or any treatment and disposal system or any extension or addition thereto, which is likely to discharge sewage or trade effluent into a stream or well or sewer or on land or bring into use any new or altered outlet for the discharge or sewage or trade effluent or begin to make any new discharge of sewage or trade effluent.

5. And whereas under the provisions of section 21 of the Air Act, no person shall without the previous consent of the Board, establish or operate any industrial plant in an air pollution control area. Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Shri Sai Melaware at H1-231 RIA Chopanki, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

operation or process or any treatment and disposal system or any extension or addition thereto, which is likely to discharge sewage or trade effluent into a stream or well or sewer or on land or bring into use any new or altered outlet for the discharge or sewage or trade effluent or begin to make any new discharge of sewage or trade effluent.

5. And whereas under the provisions of section 21 of the Air Act, no person shall without the previous consent of the Board, establish or operate any industrial plant in an air pollution control area. Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Precon Technology & Casting Ltd. (Old Name PTC Industries Ltd.)** at **B-480, RIA, Bhiwadi, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board

e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

operation or process or any treatment and disposal system or any extension or addition thereto, which is likely to discharge sewage or trade effluent into a stream or well or sewer or on land or bring into use any new or altered outlet for the discharge or sewage or trade effluent or begin to make any new discharge of sewage or trade effluent.

5. And whereas under the provisions of section 21 of the Air Act, no person shall without the previous consent of the Board, establish or operate any industrial plant in an air pollution control area. Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Uttam Plastomers Pvt. Ltd.** at **G-1005 & 1006 Phase-III RIA Bhiwadi, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: –

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: –

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300–350 kg of weight, it should have a size of minimum 6 x 4 feet, 800–1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

operation or process or any treatment and disposal system or any extension or addition thereto, which is likely to discharge sewage or trade effluent into a stream or well or sewer or on land or bring into use any new or altered outlet for the discharge or sewage or trade effluent or begin to make any new discharge of sewage or trade effluent.

5. And whereas under the provisions of section 21 of the Air Act, no person shall without the previous consent of the Board, establish or operate any industrial plant in an air pollution control area. Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Meenakashi Strips Pvt. Ltd.** at **G-1043-44, RIA, Bhiwadi, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

5. And whereas under the provisions of section 21 of the Air Act, no person shall without the previous consent of the Board, establish or operate any industrial plant in an air pollution control area. Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Pine Laminates Pvt. Ltd. (Unit-II)** at **E-36 & 37 RIA Chopanki, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

And whereas under the provisions of section 21 of the Air Act, no person shall without the previous consent of the Board, establish or operate any industrial plant in an air pollution control area. Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Kajaria Ceramics Ltd.(Unit II)** at **19 K.M Stone Bhiwadi, Alwar Road Village Gailpur, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas under the provisions of section 21 of the Air Act, no person shall without the previous consent of the Board, establish or operate any industrial plant in an air pollution control area. Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Adinath Industries** at **E-41A, RIA Khushkhera, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Kesri Alloys Private Limited**, at **B-196(A), RIA, Kehrani, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Balajimahima Alloys Pvt. Ltd.**, at **B-493 RIA Bhiwadi, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Yutaka Autoparts India Pvt Ltd** at **SPL-2C, Tapukara, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: –

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: –

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300–350 kg of weight, it should have a size of minimum 6 x 4 feet, 800–1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s GOPAL ENTERPRISES** at **F- 430 RIA Bhiwadi, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s ALWAR PIGMENTS PVT. LTD. UNIT-III at C-828 (B) RIA Bhiwadi, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: –

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: –

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300–350 kg of weight, it should have a size of minimum 6 x 4 feet, 800–1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: –

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: –

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300–350 kg of weight, it should have a size of minimum 6 x 4 feet, 800–1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: –

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: –

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300–350 kg of weight, it should have a size of minimum 6 x 4 feet, 800–1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

Sub: Directions under Section 31A of the Air (Prevention and Control of Pollution) Act, 1981 to provide and maintain stack emission monitoring facilities in accordance with Emission Regulation Part – III (ERP-III) published by CPCB in air polluting industry: regarding

Ref: Directions issued by Central Pollution Control Board (CPCB) under Section 18(1)(b) of the Air Act, 1981, to RSPCB vide letter dated 12.03.2026

Sir/Madam

1. Whereas, the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 (hereinafter collectively referred to as the "Acts") have come into force throughout the country with effect from 23.03.1974 and 16.05.1981, respectively.
2. And whereas, the said Acts have been enacted to provide for the prevention, control, and abatement of water and air pollution and for maintaining and restoring the wholesomeness of water and air, and the Rajasthan State Pollution Control Board (hereinafter referred to as the "Board") has been vested with the powers to take such steps as may be deemed necessary for enforcement of the provisions of the aforesaid Acts.
3. And whereas, under the provisions of Section 24 of the Water Act, no person shall knowingly cause or permit any poisonous, noxious, or polluting matter, determined in accordance with the standards laid down by the Board, to enter any stream, well, sewer, or land.
4. And whereas under the provisions of section 25/26 of the Act, no person shall without the previous consent of the Board establish or take any steps to establish, any industry,

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board

8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: –

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: –

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300–350 kg of weight, it should have a size of minimum 6 x 4 feet, 800–1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: –

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: –

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300–350 kg of weight, it should have a size of minimum 6 x 4 feet, 800–1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

Sub: Directions under Section 31A of the Air (Prevention and Control of Pollution) Act, 1981 to provide and maintain stack emission monitoring facilities in accordance with Emission Regulation Part – III (ERP-III) published by CPCB in air polluting industry: regarding

Ref: Directions issued by Central Pollution Control Board (CPCB) under Section 18(1)(b) of the Air Act, 1981, to RSPCB vide letter dated 12.03.2026

Sir/Madam

1. Whereas, the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 (hereinafter collectively referred to as the "Acts") have come into force throughout the country with effect from 23.03.1974 and 16.05.1981, respectively.
2. And whereas, the said Acts have been enacted to provide for the prevention, control, and abatement of water and air pollution and for maintaining and restoring the wholesomeness of water and air, and the Rajasthan State Pollution Control Board (hereinafter referred to as the "Board") has been vested with the powers to take such steps as may be deemed necessary for enforcement of the provisions of the aforesaid Acts.
3. And whereas, under the provisions of Section 24 of the Water Act, no person shall knowingly cause or permit any poisonous, noxious, or polluting matter, determined in accordance with the standards laid down by the Board, to enter any stream, well, sewer, or land.
4. And whereas under the provisions of section 25/26 of the Act, no person shall without the previous consent of the Board establish or take any steps to establish, any industry,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
10. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
11. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
12. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

13. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: –

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: –

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300–350 kg of weight, it should have a size of minimum 6 x 4 feet, 800–1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: –

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: –

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300–350 kg of weight, it should have a size of minimum 6 x 4 feet, 800–1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

Sub: Directions under Section 31A of the Air (Prevention and Control of Pollution) Act, 1981 to provide and maintain stack emission monitoring facilities in accordance with Emission Regulation Part – III (ERP-III) published by CPCB in air polluting industry: regarding

Ref: Directions issued by Central Pollution Control Board (CPCB) under Section 18(1)(b) of the Air Act, 1981, to RSPCB vide letter dated 12.03.2026

Sir/Madam

1. Whereas, the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 (hereinafter collectively referred to as the "Acts") have come into force throughout the country with effect from 23.03.1974 and 16.05.1981, respectively.
2. And whereas, the said Acts have been enacted to provide for the prevention, control, and abatement of water and air pollution and for maintaining and restoring the wholesomeness of water and air, and the Rajasthan State Pollution Control Board (hereinafter referred to as the "Board") has been vested with the powers to take such steps as may be deemed necessary for enforcement of the provisions of the aforesaid Acts.
3. And whereas, under the provisions of Section 24 of the Water Act, no person shall knowingly cause or permit any poisonous, noxious, or polluting matter, determined in accordance with the standards laid down by the Board, to enter any stream, well, sewer, or land.
4. And whereas under the provisions of section 25/26 of the Act, no person shall without the previous consent of the Board establish or take any steps to establish, any industry,

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

a

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
9. And whereas, provision of proper stack monitoring facilities is essential for assessing compliance of industries with prescribed emission standards and for enabling regulatory authorities to undertake effective monitoring and enforcement actions.
10. And whereas, the CPCB vide letter dated 12.03.2026 issued directions to the RSPCB under Section 18(1)(b) of the Air Act, 1981 to ensure compliance of provisions of ERP-III published by CPCB in air polluting industries in Delhi-NCR.
11. And whereas, your industry falls within the ambit of the aforesaid directions issued by CPCB.
12. And whereas the Board may, in exercise of the powers conferred upon it under the provisions of the section 33A of the Water Act and section 31A of the Air Act and in

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

performance of its functions conferred under these Acts, issue directions in writing to any person, officer or any authority and such person, officer or authority shall be bound to comply with such directions which includes the power direct: -

- a. The closure, prohibition or regulation of any industry, operation or process or
- b. Stoppage or regulation of the supply of electricity or water or any other service.

Therefore, in exercise of the powers conferred under Section 31A of the Air Act, 1981, and in discharge of the functions entrusted under the Water Act, 1974 and the Air Act, 1981, and to ensure compliance with the directions issued by the CPCB on 12.03.2026, you are hereby directed to ensure the following: -

1. To provide/ensure stack monitoring facilities in accordance with the Emission Regulation Part-III (ERP-III) latest by March 28,2026 for all the stacks attached to potential air polluting sources such as Boiler, Furnaces, Thermic Fluid Heaters, Kilns and Process Emissions.
2. To ensure that the position of port-hole should comply with Emission Regulation Part-III (ERP-III) published by CPCB. Special emphasis shall be given to the criteria of compliance of minimum 8D downstream from flow disturbance and minimum 2D from top of stack to ensure laminar flow at sampling point in the stack. For other details pertaining to location of port-hole para 2.5.0 at page 18 of ERP-III may be referred.
3. To provide a separate port hole of 0.1 m diameter for manual emission sampling. For port hole installation para 2.5.2 at page 19 of ERP-III may be referred.
4. In case, if the Online Continuous Emission Monitoring Systems (OCEMS) is mandated as per consent conditions, the plane of port hole for OCEMS should be 500 mm below (vertically) the plane of manual sampling port hole.
5. To ensure that the platform for monitoring should have capacity to bear 300-350 kg of weight, it should have a size of minimum 6 x 4 feet, 800-1000 mm of guard rail to ensure proper space for sampling team and equipment required for monitoring. For monitoring platform installation, para 2.5.3, 2.5.4 & 2.5.6 at page 19 & 20 of ERP-III may be referred.

Regional Office, Bhiwadi
Rajasthan State Pollution Control Board
Plot No. GO-1, Phase-II, RIICO Industrial Area, Bhiwadi-301019
e-mail: robhiwadi@gmail.com

6. To ensure that the port hole and ladder facility is safe to carry out monitoring. In place of monkey ladder, spiral type/scaffold ladder shall be provided to ensure safety of monitoring personnel.

You are further directed to submit a compliance report to this office regarding the above directions by 28.03.2026.

In the event of failure to comply with the above directions within the stipulated time, the absence of proper stack monitoring facility as per ERP-III and as prescribed above shall be considered as violation and appropriate action shall be taken including closure of the industry, without any further notice in this matter. Further, any other action deemed appropriate under the provisions of the said Acts may also be initiated.

Yours sincerely,

- Sub:** Directions under Section 31A of the Air (Prevention and Control of Pollution) Act, 1981 to provide and maintain stack emission monitoring facilities in accordance with Emission Regulation Part – III (ERP-III) published by CPCB in air polluting industry: regarding
- Ref:** Directions issued by Central Pollution Control Board (CPCB) under Section 18(1)(b) of the Air Act, 1981, to RSPCB vide letter dated 12.03.2026

Sir/Madam

1. Whereas, the Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981 (hereinafter collectively referred to as the "Acts") have come into force throughout the country with effect from 23.03.1974 and 16.05.1981, respectively.
2. And whereas, the said Acts have been enacted to provide for the prevention, control, and abatement of water and air pollution and for maintaining and restoring the wholesomeness of water and air, and the Rajasthan State Pollution Control Board (hereinafter referred to as the "Board") has been vested with the powers to take such steps as may be deemed necessary for enforcement of the provisions of the aforesaid Acts.
3. And whereas, under the provisions of Section 24 of the Water Act, no person shall knowingly cause or permit any poisonous, noxious, or polluting matter, determined in accordance with the standards laid down by the Board, to enter any stream, well, sewer, or land.
4. And whereas under the provisions of section 25/26 of the Act, no person shall without the previous consent of the Board establish or take any steps to establish, any industry,

operation or process or any treatment and disposal system or any extension or addition thereto, which is likely to discharge sewage or trade effluent into a stream or well or sewer or on land or bring into use any new or altered outlet for the discharge or sewage or trade effluent or begin to make any new discharge of sewage or trade effluent.

5. And whereas under the provisions of section 21 of the Air Act, no person shall without the previous consent of the Board, establish or operate any industrial plant in an air pollution control area. Industrial plant, under the Air Act, has been defined to mean any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere.
6. And whereas under the provisions of section 22 of the Air Act, no person operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant more than the prescribed standards.
7. And whereas, an industry has been established in the name & style of **M/s Gold Star Re-Rolling Pvt. Ltd.** at **F-671(A), RIA, Bhiwadi, District Khairthal Tijara** (hereinafter referred to as 'the industry') and the process is such that it generates polluted trade/domestic effluent & air emission.
8. And whereas, the Central Pollution Control Board (CPCB), New Delhi, has published Emission Regulation Part-III (ERP-III) in December 1985, prescribing monitoring requirement for industries including provisions relating to stack monitoring facilities, equipment, and testing procedures for regulation of emissions from industrial sources.
